

SOME GEOSTATISTICAL PACKAGES

SASHA CUI

1. PYKRIGE

The code runs on my computer. There are around 10 some examples. <https://geostat-framework.readthedocs.io/projects/pykrige/en/stable/index.html>

2. GEOSTATSPY

Maintained by Michael Pyrcz at UT Austin. Haven't tried. <https://github.com/GeostatsGuy/GeostatsPy/tree/master/examples>

3. GSTATSIM

<https://gmd.copernicus.org/articles/16/3765/2023/> <https://github.com/GatorGlaciology/GStatSim> Most complete tutorials

4. PYGEOSTAT

The pictures look great but it's a shame that they require Python 3.8. I am now using Python 3.10. Various dependency issues! <https://www.ccgaberta.com/pygeostat/index.html>

5. GENERAL COLLECTION

<https://github.com/opengeos/python-geospatial?tab=readme-ov-file>
